# “Taking care of those who took care of us”

## Providing home safety inspections and safety equipment installation for nearly 20 years.

As a Licensed Registered Nurse (RN), I specialize as a Clinical Safety Liaison to meet with patients and family members at the bedside in hospitals, nursing homes, and skilled rehab units. I assess the patients mobility needs according to their diagnosis.

This ensures that all safety equipment is ADA installed and fitted to the patients individual needs. As a RN, I work as an extension of the discharge planning team and work with case managers, social workers, PT, OT, and schedule my services to perform a complimentary safety inspection in the home, and install all safety equipment needed **before** the patient is discharged back home.

My approach using this safety care plan model has proven to sharply reduce fall risks and re-hospitalization rates with Seniors, while increasing patient outcomes with mobility and independence in the home.

*Ken Elkins, RN*

Disability Fall Prevention Expert for Senior  
Home Safety: *Installations and Modifications*

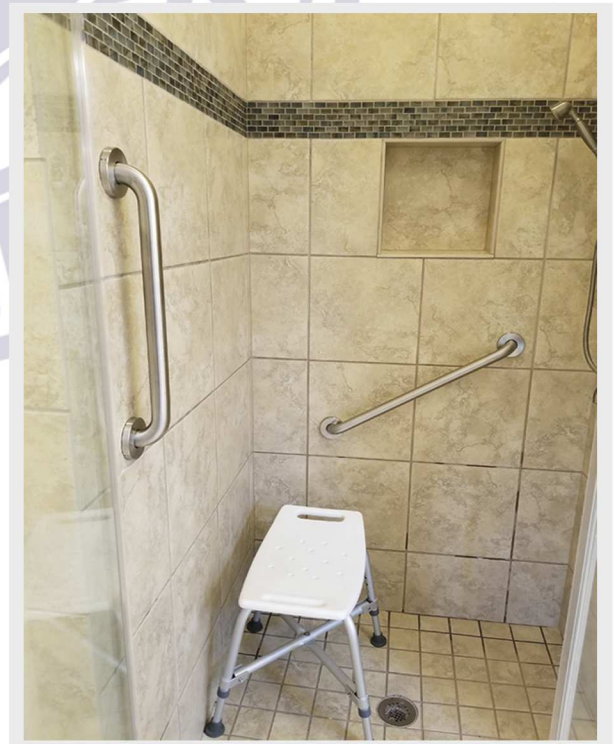

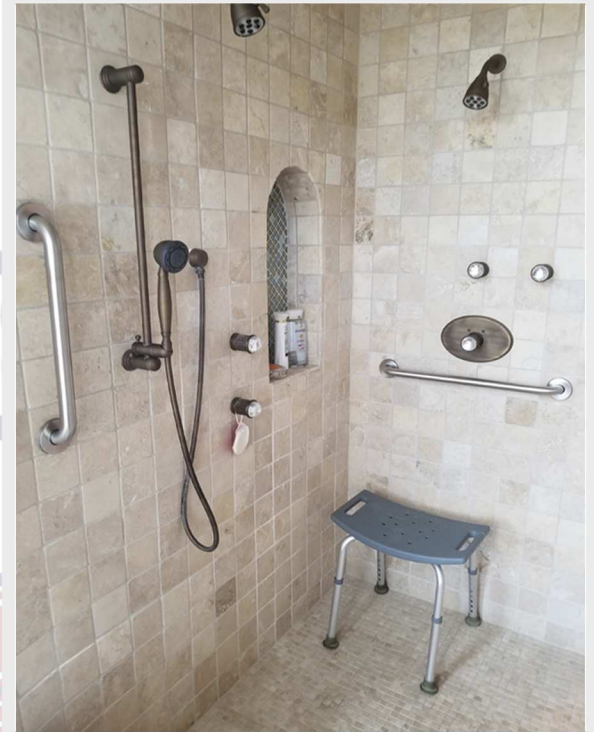

**Senior Home Safety  
Equipment Installation**

**Safety Grab Bars for:**
